## What is claimed is:

- 1. A cryptographic key split combiner, comprising:
- a) a plurality of key split generators for generating cryptographic key splits; and
- b) a key split randomizer for randomizing the cryptographic key splits to produce a cryptographic key;
- c) wherein each of said key split generators includes means for generating key splits from seed data.
- 2. The cryptographic key split combiner of claim 1, wherein said plurality of key split generators includes a random split generator for generating a random key split based on reference data.
- 3. The cryptographic key split combiner of claim 2, wherein said random split generator includes means for generating a random sequence based on the reference data.
- 4. The cryptographic key split combiner of claim 2, wherein said random split generator includes means for generating a pseudorandom sequence based on the reference data.

- 5. The cryptographic key split combiner of claim 2, wherein said random split generator includes means for generating a key split based on the reference data and on chronological data.
- 6. The cryptographic key split combiner of claim 2, wherein said random split generator includes means for generating a key split based on the reference data and on static data.
- 7. The cryptographic key split combiner of claim 6, further including means for updating the static data.
- 8. The cryptographic key split combiner of claim 7, wherein the means for updating the static data includes means for modifying a prime number divisor of the static data.
- 9. The cryptographic key split combiner of claim 1, wherein said plurality of key split generators includes a token split generator for generating a token key split based on label data.
- 10. The cryptographic key split combiner of claim 9, further comprising means for reading the label data from a storage medium.

- 11. The cryptographic key split combiner of claim 9, wherein the label data includes user authorization data.
- 12. The cryptographic key split combiner of claim 9, wherein said token split generator includes means for generating a random sequence based on the label data.
- 13. The cryptographic key split combiner of claim 9, wherein said token split generator includes means for generating a pseudorandom sequence based on the label data.
- 14. The cryptographic key split combiner of claim 9, wherein said token split generator includes means for generating a key split based on the label data and on organization data.
- 15. The cryptographic key split combiner of claim 9, wherein said token split generator includes means for generating a key split based on the label data and on static data.
- 16. The cryptographic key split combiner of claim 15, further including means for updating the static data.

- 17. The cryptographic key split combiner of claim 16, wherein the means for updating the static data includes means for modifying a prime number divisor of the static data.
- 18. The cryptographic key split combiner of claim 1, wherein said plurality of key split generators includes a console split generator for generating a console key split based on maintenance data.
- 19. The cryptographic key split combiner of claim 18, wherein said console split generator includes means for generating a random sequence based on the maintenance data.
- 20. The cryptographic key split combiner of claim 18, wherein said console split generator includes means for generating a pseudorandom sequence based on the maintenance data.
- 21. The cryptographic key split combiner of claim 18, wherein said console split generator includes means for generating a key split based on previous maintenance data and on current maintenance data.
- 22. The cryptographic key split combiner of claim 18, wherein said console split generator includes means for generating a key split based on the maintenance data and on static data.

- 23. The cryptographic key split combiner of claim 22, further including means for updating the static data.
- 24. The cryptographic key split combiner of claim 22, wherein the means for updating the static data includes means for modifying a prime number divisor of the static data.
- 25. The cryptographic key split combiner of claim 1, wherein said plurality of key split generators includes a biometric split generator for generating a biometric key split based on biometric data.
- 26. The cryptographic key split combiner of claim 25, wherein said biometric split generator includes means for generating a random sequence based on the biometric data.
- 27. The cryptographic key split combiner of claim 25, wherein said biometric split generator includes means for generating a pseudorandom sequence based on the biometric data.
- 28. The cryptographic key split combiner of claim 25, wherein said biometric split generator includes means for generating a key split based on biometric data vectors and on biometric combiner data.

- 29. The cryptographic key split combiner of claim 25, wherein said biometric split generator includes means for generating a key split based on the biometric data and on static data.
- 30. The cryptographic key split combiner of claim 29, further including means for updating the static data.
- 31. The cryptographic key split combiner of claim 30, wherein the means for updating the static data includes means for modifying a prime number divisor of the static data.
- 32. The cryptographic key split combiner of claim 1, wherein the cryptographic key is a stream of symbols.
- 33. The cryptographic key split combiner of claim 1, wherein the cryptographic key is at least one symbol block.
- 34. The cryptographic key split combiner of claim 1, wherein the cryptographic key is a key matrix.
  - 35. A process for forming cryptographic keys, comprising:
  - a) generating a plurality of cryptographic key splits from seed data; and

- b) randomizing the cryptographic key splits to produce a cryptographic key.
- 36. The process of claim 35, wherein generating a plurality of cryptographic key splits includes generating a random key split based on reference data.
- 37. The process of claim 36, wherein generating a random key split includes generating a random sequence based on the reference data.
- 38. The process of claim 36, wherein generating a random key split includes generating a pseudorandom sequence based on the reference data.
- 39. The process of claim 36, wherein generating a random key split includes generating a key split based on the reference data and on chronological data.
- 40. The process of claim 36, wherein generating a random key split includes generating a key split based on the reference data and on static data.
  - 41. The process of claim 40, further including updating the static data.

- 42. The process of claim 41, wherein updating the static data includes modifying a prime number divisor of the static data.
- 43. The process of claim 35, wherein generating a plurality of cryptographic key splits includes generating a token key split based on label data.
- 44. The process of claim 43, further comprising reading the label data from a storage medium.
- 45. The process of claim 43, wherein the label data includes user authorization data.
- 46. The process of claim 43, wherein generating a token key split includes generating a random sequence based on the label data.
- 47. The process of claim 43, wherein generating a token key split includes generating a pseudorandom sequence based on the label data.
- 48. The process of claim 43, wherein generating a token key split includes generating a key split based on the label data and on organization data.

- 49. The process of claim 43, wherein generating a token key split includes generating a key split based on the label data and on static data.
  - 50. The process of claim 49, further including updating the static data.
- 51. The process of claim 50, wherein updating the static data includes modifying a prime number divisor of the static data.
- 52. The process of claim 35, wherein generating a plurality of cryptographic key splits includes generating a console key split based on maintenance data.
- 53. The process of claim 52, wherein generating a console key split includes generating a random sequence based on the maintenance data.
- 54. The process of claim 52, wherein generating a console key split includes generating a pseudorandom sequence based on the maintenance data.
- 55. The process of claim 52, wherein generating a console key split includes generating a key split based on previous maintenance data and on current maintenance data.

- 56. The process of claim 52, wherein generating a console key split includes generating a key split based on the maintenance data and on static data.
  - 57. The process of claim 56, further including updating the static data.
- 58. The process of claim 56, wherein the updating the static data includes modifying a prime number divisor of the static data.
- 59. The process of claim 35, wherein generating a plurality of cryptographic key splits includes generating a biometric key split based on biometric data.
- 60. The process of claim 59, wherein generating a biometric key split includes generating a random sequence based on the biometric data.
- 61. The process of claim 59, wherein generating a biometric key split includes generating a pseudorandom sequence based on the biometric data.
- 62. The process of claim 59, wherein generating a biometric key split includes generating a key split based on biometric data vectors and on biometric combiner data.

- 64. The process of claim 63, further including updating the static data.
- 65. The process of claim 63, wherein updating the static data includes modifying a prime number divisor of the static data.
  - 66. A cryptographic key, formed by the process of claim 35.
  - 67. The cryptographic key of claim 66, including a stream of symbols.
- 68. The cryptographic key of claim 66, including at least one symbol block.
  - 69. The cryptographic key of claim 66, including a key matrix.
